Thank you for purchasing a MABIS Digital Thermometer. Please read the following instructions to achieve the most accurate temperatures and safe operation. With proper care and use, your thermometer will provide you with years of reliable readings.

What is a “Normal” Temperature?
Although the generally accepted “normal” temperature reading is 98.6°F, temperature readings can vary from 97°F to 99°F, and may be considered “normal.” Variations in temperature can be attributed to activities such as exercise, smoking, eating and drinking. Even time of day may influence your temperature. For example, your temperature is lower in the morning than in the afternoon. Other variations may be due to the location of the temperature reading. While the oral temperature follows the guidelines previously described, a rectal temperature is generally 0.1°F higher. Conversely, an axillary (under the arm) temperature will be 0.1°F lower.

Taking an Oral Temperature
1. Using the diagram on the right, place the thermometer under the tongue so the tip is touching with the thermometer perpendicular to the body.
2. Position the arm across the chest so the probe tip is well covered by the arm. This insures the probe is not affected by the room’s air.
3. When the peak temperature has been reached, the °F will stop flashing and the thermometer will sound four sets of five quick beeps.
4. To turn the unit off, press the ON/OFF button. The unit will automatically shut off after approximately nine minutes.

NOTE: Axillary temperatures are generally 0.1°F lower than oral readings.

Taking a Rectal Temperature
1. The unit must never be sterilized by boiling, gas or steam autoclaves.
2. Do not walk, run or talk during temperature taking.
3. Clean the thermometer before and after each use.
4. Store the unit in the protective case when not in use.
5. Do not bite the probe.
6. Do not apply the disposable probe cover, apply a water-soluble lubricant to the tip.
7. Gently insert the probe a maximum of 1/2” into the rectum.

NOTE: The mouth must remain closed during the measurement for the most accurate reading. Opening the mouth could result in an extended measurement time and may affect the reading.

Taking an Axillary Temperature (under the arm)
Approximate measurement time: 25 seconds
1. Wipe the underarm with a dry towel.
2. Place the probe tip under the axilla so the tip is touching the skin and the thermometer perpendicular to the body.
3. When the peak temperature has been reached, the °F will stop flashing and the thermometer will sound four sets of five quick beeps.
4. To turn the unit off, press the ON/OFF button. The unit will automatically shut off after approximately nine minutes.

NOTE: Axillary temperatures are generally 0.1°F lower than oral readings.

What is a “Normal” Temperature?
Although the generally accepted “normal” temperature reading is 98.6°F, temperature readings can vary from 97°F to 99°F, and may be considered “normal.” Variations in temperature can be attributed to activities such as exercise, smoking, eating and drinking. Even time of day may influence your temperature. For example, your temperature is lower in the morning than in the afternoon. Other variations may be due to the location of the temperature reading. While the oral temperature follows the guidelines previously described, a rectal temperature is generally 0.1°F higher. Conversely, an axillary (under the arm) temperature will be 0.1°F lower.

Cleaning Instructions
Before and after each use, clean the thermometer with a soft cloth and 70% isopropyl alcohol diluted with water, or wash with cold soapy water. An intact unit can be autoclaved.

NOTE: The unit must never be sterilized by boiling, gas or steam autoclaves. However, do not soak for an extended period of time.

1. The unit must never be sterilized by boiling, gas or steam autoclaves.
2. The use of any other solution or cleaning method beyond the above mentioned may result in reliability problems with the thermometer and void your warranty.
3. Clean the thermometer before and after each use.
4. Press the ON/OFF button (the unit will beep) to activate the thermometer.

This is the LCD display test, which insures all parts of the display are functioning properly. Continue to hold the button down and in approximately 2 seconds the display will show the last recorded temperature as follows.

This display shows the last temperature reading. Within approximately 2 seconds of releasing the button or if no reading is stored in memory, the display will read as follows.

This display denotes normal operation. Err denotes a malfunction.

Changing the Battery
1. Slide the battery cap away from the unit.
2. Using a non-metal pointed tool, carefully remove the battery.
3. Insert the new battery with the negative (–) side facing the back side of the unit.
4. Carefully slide the battery cap back into place, making sure that the cap fits snugly to protect the battery compartment from moisture.

NOTE: Please properly dispose the battery away from small children and heat.

Specifications are subject to change without notice. Meets ASTM Standard E1112.

LIMITED LIFETIME WARRANTY
MABIS Healthcare (MABIS) guarantees that its MABIS Digital Thermometer will be free from manufacturing defects under normal use for as long as the original purchaser owns the product.

This warranty covers only normal use, and does not apply to use in any clinical or commercial applications. This warranty does not cover batteries or other power sources that may be provided with or used with the MABIS Digital Thermometer. This warranty is voided if the MABIS Digital Thermometer product is misused or abused in any manner.

Any implied warranties which the purchaser may have are limited in duration to the time that the original consumer purchaser owns the product. Some states do not allow limitations as how long an implied warranty lasts, so the above limitation may not apply to you.

This warranty constitutes MABIS’ only responsibility and obligation to repair and/or replace materials or components, or refund the purchase price. MABIS will not be responsible for any indirect, incidental, special, consequential, or punitive damages or other loss, including, but not limited to, damage to or loss of other property or equipment and personal injuries, whether to purchaser or others. MABIS shall in no event be liable to the purchaser for any amount in excess of the cost of replacement or replacement of the unit, or the purchase price of the unit. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Thank you for purchasing a MABIS Digital Thermometer.
